The Way They Have In America.

I.—At the Chicago Radio Exhibition. By HAMILTON FYFE.

It was a great night in Chicago. The whole population seemed to be in the streets. All the 'parking' stands were as full of cars as they are in the daytime. Everyone wanted to see the new street-lamps in the chief thoroughfare turned on suddenly by the President's touch on a switch in Washington.

I could not feel any great excitement about it myself, and it seemed to offer me a good opportunity to see the Radio Exhibition in comfort. So off I went, calculating that the Coliseum halls would be fairly empty about the time that the brilliant clusters of lamps were to be filled with their novel radiance.

Unfortunately, this same calculation had been made by nine or ten thousand other 'smart Alecks.' The place was packed. Movement had to be slow. To get near the most popular features of the show, one had to wait and edge one's way gradually into a crowd. The people were so good-natured, however, so ready to be friendly, and so keenly interested, that even waiting was pleasant, and I was always rewarded by what I saw or heard when I could get near.

First of all, near the entrance, I wriggled my way towards 'Uncle Bob,' one of a number of announcers who were on view to their admirers. Rather an ordeal to face people who only know your voice and who have formed their own impressions of your personality! 'Uncle Bob' came through it with full marks. A large man with a large, smiling face, he jollied all his questioners and delighted children especially (there were any number of them) by his quips and puns.

Someone asked him about a small boy in Milwaukee who ran away from home 'to find Uncle Bob.' He got a lift from a car-

driver going towards Chicago by saying that he lived there. When he arrived, he wandered into a park and went to sleep. The police found him, and were puzzled when he told them the object of his visit. Who could Uncle Bob be? The nine-year-old boy scornfully asked them 'where they

Mr. HAMILTON FYFE.

formerly editor of the 'Daily Mirror,' and later of the 'Daily Herald,' who is now touring in the United States. We publish this week the first of a short series of articles from his pen giving his impressions of broadcasting in America.

lived anyway,' and explained. Before they sent him back to his parents, they kindly took him to the studio from which Uncle Bob broadcasts, so he went home happy.

There are many broadcasting studios in this city of Chicago. Each newspaper has one, some of the big stores, and several radio companies have them. You look at all the programmes, choose what you want, and tune in for it. But I think our British way of having only one distributive company is better, and, so far as my experience has gone, our programmes are of decidedly better quality than any that are to be listened to here in America. Altogether, there are over 500 licensed broadcasting stations in the United States. At the Radio Show I saw a lady who had won the title of Champion Woman Listener by recording contact with as many as 326 American Stations.

Another lady whose receptions were well attended was the Radio Queen of America, Mrs. Lotta Harranff. She is the wife of a district postmaster and gained her title by competition. She 'held a forum' each day, talking to audiences of women on such subjects as: 'Dad and the Radio: How to interest fathers in radio programmes'; 'Young Folks and the Radio: How to keep them by the fireside'; 'Family and Friends: a Radio Sunday evening.'

Mrs. Harranff says that in America the wives and mothers are the chief buyers of wireless sets. At first, it was the man who got interested and made the purchase—especially if he were mechanically minded and liked to tinker at an instrument. Women then were rather impatient of the apparatus and complained of its 'cluttering up the place.' But to day they are, according to the Radio Queen, alive to its value—(1) For education; (2) For keeping the family at home.

Further, the handsome appearance of the sets which are now being made undoubtedly

(Continued overleaf in column 3.)

The Problem of the Thunderstorm.

By Dr. G. C. Simpson, C.B., F.R.S.

In response to numerous requests, we print this week the second half of the Talk on Thunderstorms which Dr. Simpson, Director of the Meteorological Office, recently broadcast from the London Studio.

IN last week's issue of *The Radio Times* I gave a general description of how thunder-clouds are built up, and what factors are necessary in order to break up the falling raindrops and charge them with positive electricity, and the air around them with negative electricity. I will now try to make clear the actual mechanism of a thunderstorm.

I want you to picture a hot summer's day with the sun beating down through a clear sky. The sun warms up the ground and this heats the air lying in contact with it. But it is the tendency of warm air to rise, and during the course of the day ascending currents start here and there and rise through the surrounding atmosphere. The air of these currents as it ascends gets colder and colder, until the water vapour it contains condenses into clouds.

You have all seen on a summer day clouds appearing in all parts of the sky like heaps of cotton-wool. Each one of these is the top of an ascending current, and if you will watch them carefully you will see that they continually get higher and higher as they develop. If the conditions are suitable, these currents and the clouds associated with them grow very rapidly, and finally we get the great masses of cumulus cloud which we all associate with a thunderstorm. Into this cloud the air is ascending at a rapid rate. You cannot see the ascending current itself, but you can sometimes see leaves and paper being blown inwards and upwards by the wind which is feeding the storm.

The ascending currents are composed of warm damp air and, therefore, they carry upwards great quantities of water in the form of vapour, which is deposited first as cloud particles and then as rain. At first the rain falls through the ascending currents of air, but as the latter increase in intensity, first all the small drops get held up and then the larger drops.

Finally, there comes a time when in some part of the ascending current the velocity becomes greater than twenty-four feet per second. Through this part of the ascending current no water can fall; but this is just the place where the water is being deposited at the greatest rate, for the more rapid the current the more water vapour is carried upwards. The large amount of water which is thus prevented from falling accumulates near the top of the current, where the upward velocity falls off. The accumulation of water can become very great. Sometimes the ascending current suddenly stops, and then the accumulated water falls, and we get what is called a cloud-burst.

The Lightning Flash.

All the time the water is being held up by the ascending current it is going through an important process. Small drops are constantly uniting to form large drops, which in turn are broken up again into small drops. In this region of the cloud, therefore, thousands and thousands of drops are broken up every second, and every time a drop breaks there is a separation of electricity, the drops becoming positively charged and the air negatively charged. But while the drops remain near the top of the ascending current the negative electricity is carried rapidly away in the air stream. This process goes on until the charge on the rain which is being held up becomes very large indeed. Finally, the electrical force becomes so great that it is discharged by a lightning flash. But this only relieves the electrical pressure for a short time; the water remains and continues to be broken up, so more charge is produced, which gives rise to further lightning discharges.

I said at the beginning of my article that

usually the lightning appears to start from one portion of the cloud, and now you see the reason why; for that portion of the cloud is where the ascending current causes the water to accumulate, and it is here that the separation of electricity is at its maximum, and so this is the chief centre of the lightning discharges.

I have now given a very rapid, but somewhat incomplete, account of the mechanism of a thunderstorm. You have seen that the electricity is produced by the breaking up of the rain; but you have also seen that it is necessary for there to be an ascending current of more than twenty-four feet a second before the water can be held up in sufficient quantities to produce the large electrical field necessary for a lightning discharge. If this critical velocity is not reached the rain simply falls to the ground without thunder and lightning being produced. Thus we see why all rainstorms are not thunderstorms, and why all thunderstorms are associated with heavy rain.

In conclusion, I must say a few words about the thunder. There are two things to explain about thunder: the first is the noise itself, and the second is the long-drawn-out rumble. There is little difficulty in explaining the noise. As the lightning breaks its way through the air, extremely high temperatures are generated in the narrow channel which it cuts for itself. The light given out by a lightning flash is evidence of this high temperature, for the air becomes, in popular language, white hot. This high temperature causes the air to expand all along the path of the discharge with explosive violence. It is the explosion wave generated in this way which we hear as thunder.

The rumbling is due to several causes. A lightning flash is often several miles long, and the explosion wave from the near end will obviously reach us first, then the wave arrives from more distant parts. As it takes five seconds for sound to travel a mile, it is clear that the sound from the far end of a flash two miles long will arrive ten seconds after we hear the sound from the near end. During the whole of this ten seconds sound is arriving from different points along the flash, the intensity of the sound rising and falling according to the direction taken by the flash. Another cause for the rumbling is the echoes which reach us from mountains and even from clouds. These echoes arrive at different times and add to the noise we hear. Finally, there may be several flashes taking place so rapidly one after the other that the thunder from one flash arrives before the thunder from the previous flash has died out.

Thus, the thunder is caused by the explosive heating of the air in the channel of the lightning discharge, while the drawn-out rumbling is due to several causes, the chief of which is the long time it takes for sound to travel from the distant end of the lightning flash.

BROADCASTING AND THE STAGE.

WITH regard to the vexed question of Broadcasting and the Stage, it seems to me that radio ought not to be regarded inimically, but with feelings of reciprocity. Take a musical play, for instance. The more widely its popular airs are known, the more likely are its hearers to want to go to the theatre where it is being played to see the play as well as hear it.

On the other hand, a play containing little more than very witty dialogue might find a more formidable rival in the wireless. The only sort of play which, as a manager, I feel might be jeopardized over the wireless, is a play dependent on its situations and facial expression. Broadcasting, like filming, can be of far-reaching usefulness to theatrical managers if administered in sufficiently skilful doses.—*Mr. Arthur Bourdier, in a Talk from Glasgow.*

The Way They Have In America.

(Continued from the previous page.)

adds to the charm of the home. Women like them as furniture. Certainly there were some very fine cabinets and circular receivers in the show. Prices, I noticed, ran up as high as £200.

Of the 12,000,000 receiving sets in operation throughout the world, the United States are believed to contain as many as 5,500,000. The number of radio manufacturers is, therefore, large, and their enterprise was proved by the character of the exhibits they sent to Chicago. The exhibition was described as the biggest and most complete that has been held anywhere in the world, and, so far as size went, I think the boast was justified. Probably, the other part of it could have been maintained as well, but there was nothing so good as the reproduction of a B.B.C. studio at the recent Radio Show at Olympia, in London.

Some of the little lectures which the men in charge of the stands were giving struck me both by their usefulness and by the picturesque terms they employed. One was telling how to protect oneself against 'bloopers.' Do you know what a 'blooper' is? It means a person who causes 'regenerative sets that are as ticklish as a nervous old maid in a haunted house to squeak and shriek at the slightest touch.'

Among the little things which amused me as I walked—or, rather, shuffled—through the Chicago Coliseum aisles, were the free distribution of a paper bag 'to hold your circulars' by a daily newspaper, and the demonstration that radio waves of sound could be heard inside a steel safe! What tickled me even more was the story told me by an acquaintance whom I ran into.

It was about a series of programmes which is being arranged by the principal Chicago stations, to be called 'Musical Journeys to Many Countries.' Among the national songs are to be included drinking songs, and the question has been raised (and actually submitted to lawyers for their opinions) whether this will be a violation of the Volstead Act prohibiting alcoholic liquor!

Here is something else I was told. A wide census has been taken of the songs which give most pleasure. Very few jazz melodies have been asked for. Old favourites like 'The Last Rose of Summer,' 'Killarney,' 'Believe me if all those Endearing young Charms,' and 'Silver Threads Among the Gold' have won the day.

'WHICH STATION WAS THAT?'

A 'World Radio' Service.

Readers who experience any difficulty in identifying any of the foreign transmissions which they may hear should fill in the coupon printed in each issue of 'World Radio,' and forward it to that journal at Savoy Hill, Strand, W.C.2. The answer will appear under the heading of 'Which Station Was That?' in the issue of the following week.

London and Daventry News and Notes.

WE are now able to give details, additional to those published in our last issue, of the programmes which have been arranged for the week preceding and ending on Christmas Day. The transmissions will all be in keeping with the festive season, yet they are so varied in their character as to please listeners of all tastes. The principal item on Sunday afternoon, December 19, will be a programme of music by that great English composer, Dr. Vaughan Williams, who will himself conduct, the soloist being Mr. Harold Williams (Baritone). At 5.15 p.m. the first of a series of a new feature, which is to run for some time—the reading of selections from Great Poems—will be introduced. The choice this afternoon is Browning's *Child Roland*. This will be followed by another of the Children's Services which are included periodically on Sundays. The evening programme, after the studio service and an appeal by Viscount Cave on behalf of the Police Court Mission, will be devoted to a ballet concert, when the items will be of a Christmas nature.

An hour of first-class vaudeville turns, such as was so popular a part of the Birthday Week programmes, will comprise the main part of the programme on Monday, December 20. Then, between 9 and 10 o'clock, there is to be a concert by the Choral Chamber Orchestra, with Charles Kelly and Lucy Pierce playing a Bach 'Double' Concerto. Following the reading of the second general news bulletin, John Henry will be heard until 10.30, when it is hoped to relay, for half an hour, portions of the programmes from either American or Continental stations. In this connection arrangements have been made for several special transmissions by various stations in the United States, including one or two programmes by the Porter K. Pott Orchestra, which some months ago was heard playing at the Van Culer Hotel, Schenectady, from where it was relayed by one of the American stations.

A performance of Humperdinck's opera, *Hansel and Gretel*, will be given in the studio between 7.30 and 9.30 o'clock on Tuesday, December 21. This work, founded on one of the favourite tales by the brothers Grimm, is unique, not only in its masterly treatment of simple, childlike themes, with all the resources of modern orchestral writing, but in this too, that it appeals irresistibly to the child who hears in it a beloved tale, more happily and vividly told than ever before, and to the listener who knows it for a masterpiece of highly original musicianship. Later that evening there is to be half-an-hour of variety.

Never has there been given a broadcast programme like that part which will include a Nativity play, to be relayed from St. Hilary's Church, Marazion, Cornwall, on Wednesday, December 22. The play, entitled *Bethlehem*, was written by the Rev. Bernard Walker, vicar of the parish, and its performance by children and others who live in this remote, rural spot, just by the Cornish coast, is not intended to be anything in the nature of a public entertainment. It is merely an act of devotion, and those who take part in it are not trained for anything like a stage performance. It may be mentioned that the play was first performed last year, when it was witnessed by Mr. George Bernard Shaw, who was much impressed by it. Listeners are simply privileged to hear it by the courtesy of the vicar, but it should be pointed out that it is quite possible that some of those who take part and speak in their own dialect may not be clearly heard or even understood, because no attempt will be made to adapt the play for broadcasting. The play will be prefaced by Mr. Filson Young in a short talk, during which he will describe the church and its surroundings.

At 9.15 p.m. we are to hear some more of those delightful children's poems by A. A. Milne. It will be remembered that about a year ago a recital of poems by the same author which had been set to music by H. Fraser-Simson was broadcast. It was given by Mr. Dale Smith, and that the poems were as pleasing to grown-ups as to the younger generation is shown by the large number of requests for their repetition which have been coming in ever since. The new collection of poems we are giving this evening has also been set to music by H. Fraser-Simson, and Mr. Dale Smith will give their first broadcast performance.

No excuse will be made to listeners who ordinarily switch off their sets early for keeping them out of bed a little later than usual this evening for another programme arranged in the American style which is to be given between 10.15 and 11 o'clock. There is no doubt as to the popularity of the previous transmission of this kind, given

The Rt. Hon. J. RAMSAY MACDONALD, M.P., will give listeners throughout the British Isles an account of his experiences during his recent holiday in the Sahara. This Talk, which promises to be of unusual interest, will be given in the London Studio and broadcast from all Stations on Thursday, December 2, at 10.15 p.m.

several weeks ago, but our second venture is to be even more ambitious. Not only will it include dance music and a good percentage of what is perhaps the most interesting part to British listeners of all American programmes—the inimitable style of their announcers—but it will contain some actual reproductions of the voices of one or two of the best-known broadcast artists in the United States.

It almost goes without saying that Christmas and Dickens are inseparable. So we find the first part of the programme on Thursday evening, December 23, given over to a performance of a Pickwick Party. This has been specially arranged for broadcasting by Stanley West and set to music by Marjorie Beighton. It will include all the important characters created by the great novelist. A cheery programme of selections from musical comedies will be played by the orchestra between 9.15 and 10 o'clock, to be followed after the news by another light feature. Another Christmas Party has been arranged for Friday, December 24. It will be recalled that a party was last year given by the 'Broadcasters'; this year's will be arranged by Miss Mabel Constantinou, whose popularity before

the microphone and ability as an artist are known to all listeners. After an hour of this, something of a change will be introduced. Mr. A. J. Alan, the author and teller of those 'far-fetched' though enthralling stories, always so keenly anticipated by listeners, will have something to say. It will be Christmas Eve, and Mr. Alan has had a greater experience of the supernatural than most of us. Then at nine o'clock there is to be a relay of carols from the Church of St. Mary, Whitechapel, followed by the singing of five of Cyril Scott's songs by Miss Marion Cate, the composer being at the piano.

Christmas Day will begin with the relaying of a Cathedral Service from either York or Manchester at 11 a.m., and another service from Canterbury Cathedral between 3 and 4.15 p.m. Mr. George Grossmith, the well-known actor-manager, will later be heard in a reading from Dickens and also some of Hilda Belloc's *Confessions of a Pilgrim*. Dance music will be the order at tea-time. The evening programme, which begins at six o'clock, will consist of an hour's military band music, followed by No. 8 of the series of 'My Programmes.' Who else but Father Christmas should compile this? Subsequently listeners will hear more of the amusing adventures of Will Hay, the schoolmaster-comedian.

Dance music will be broadcast every night from both the London and Daventry stations, as well as from all stations when it is usual for it to be given. On Christmas Eve there will be an extension of dance music from both London and Daventry until 2 a.m. It should also be pointed out that on several evenings it has been necessary to re-arrange the times of the '9.45 recitals,' details of which will be given on our programme pages in due course.

The end-of-term concert which, as already stated in *The Radio Times*, is to be relayed from Eton on Wednesday, December 8, will include the Overture *King Otho* (arranged by Hunt) and Stanford's *Phaenix* (orchestrated by Elgar and orchestra). There will also be a pianoforte solo by the winner in the House Instrument Competition, and, if time permits, three part songs.

Devotees of winter sports—and there must be many among listeners—will welcome a talk to be given on Tuesday, December 7, by the Rt. Hon. Lord Northesk, when he will recount some of his experiences in Switzerland. Lord Northesk is a well-known tobogganing expert, and last year won two of the chief events at St. Moritz—the Grand National and the Curzon Cup.

Some people, subjects, and dates for those who like talks:—

- Monday, December 6.—Mr. A. W. P. Gayford: 'Makers of Modern Europe (Bismarck)'; Mr. Alfred Cox, Secretary of the British Medical Association: Ministry of Health Talk—The General Practitioner.
- Wednesday, December 8.—Lieut.-Col. W. P. Drury: 'The Boyhood of Lord Clive'; Professor George Gordon: *Companionship Books* (Cowper's Letters).
- Thursday, December 9.—Mr. C. Lewis Hind: 'Great Artists (Turner)'; Professor A. H. Barker: 'House Heating'; Mr. Trevor Clark: 'The History of the Tower of London, with special reference to the Ceremony of the Keys'.
- Friday, December 10.—Mr. E. V. Knox ('Evie' of *Pench*): Humorous Talk—'Not Bornes, but Bourne-mouth'.
- Saturday, December 11.—Mr. E. G. Prasathap: Cotchingam: 'Hindu Marriage Ceremonies'; Mr. Ivan G. Sharpe: Soccer Talk—The Great Cup Draw.

News From the Provinces.

MANCHESTER.

AN interesting concert is promised for Sunday, December 5, when the famous Brookley Quartet, Miss Marie Bennett, and Mr. Sydney Coltham will be responsible for the programme. Dr. Adolph Brookley is principal of the Royal Manchester College of Music. Born on the shores of the Sea of Azov over seventy-five years ago, he studied under Hellmesberger, the great quartet player, and after travelling Europe, became professor of the violin at the Moscow Conservatoire. Later, at the invitation of Sir Charles Hallé, he came to Manchester to take up the post of professor at the Royal Manchester College of Music, and thirty-one years ago made his debut with the Hallé Orchestra in the Mendelssohn Concerto.

Mr. Herbert Heyner, the well-known baritone, will, on Thursday, December 9, give a short recital of gipsy songs of Bohemian and Russian. There is a peculiar fascination about these folk songs. Their pure melodies make them immortal. Even to-day at Christmas the Romany women in our own country sing carols, the melodies of which remain in the memory for many years.

It is encouraging to be able to report that considerable progress has been made with our Wireless Fund for the Blind. Inaugurated by the Free Trade Hall concert on October 27, the fund has now passed the £600 mark. Great assistance was given by the staff at the Manchester Wireless Exhibition, and altogether supporters of the movement can be particularly pleased with what has so far been done. But the area to be served is a large one, so let us hope that the present rate of progress will continue. We are grateful, too, for the splendid contributions sent in through the post.

Mr. Claude Martin (Dickens sketches), Miss Catherine Clifford (Impressions and sketches at the piano), Miss Jean Paul and Miss Leonie Lasselles, will be heard during a variety programme on Wednesday, December 8.

LIVERPOOL.

THE Happy Housewife, described by the author, Mr. Harold Brighouse, as a 'grotesque in one act,' is to be performed by the Liverpool Radio Players on Wednesday, December 15. The scene is laid in Naples at the beginning of the nineteenth century, and an exciting plot is developed on original and humorous lines. Miss Marvel Hulme, who is playing the leading part, 'Nita,' has been a member of the Radio Players since their formation, previously touring America with the famous actor, John Shine, and playing 'leads' with the Pioneer Players.

PLYMOUTH.

THE St. Gabriel's Male Voice Quartet, a combination already well known to West Country listeners, will be heard during the early part of the evening programme on Saturday, December 11.

A short song recital by Madame Sara Williams, of the Beecham and Carl Rosa Opera Companies, will be included in the local programme on Wednesday, December 8. Mr. Foden Williams, the well-known entertainer, will again provide an amusing interlude, after which a fantasy entitled *The Maker of Dreams*, by Oliphant Down, will be broadcast.

Forthcoming talks:—

Thursday, Dec. 9.—Mr. T. Wilkinson Riddle: 'Marie Corelli—A Memory.'

Friday, Dec. 10.—Mrs. Zulma Lyuel: French talk—The Art of Story-Telling.

CARDIFF.

ANOTHER of the popular war-time read-scenes evenings has been arranged for Monday, December 13, when incidents will be given representing the Call to Arms and the Departure of the B.E.F. to France, the Armistice, and the Return. The artists chosen for this programme are all old favourites; Mr. John Burke, singer of songs comic and spirited; Yvette, the quaint comedienne; Miss Grace Dandel, who will be heard in pathetic lullaby and songs with touching choruses; and Mr. Donald Davies, who will take the part of Old Bill. Yvette and Mr. Davies will also be heard in a sketch entitled *Tommy Buys a Souvenir*, which was first performed by the famous 'Splinters.' It is by Laurence Green (Captain Green, M.C.), who was severely wounded in France.

Cardiff Station is doing all it can to encourage those who care to try their hand at writing plays about Wales and the West Country. Unsuitable manuscripts are not rejected at sight if reconstruction is at all possible, as more than one author, whose plays have been successfully broadcast, can testify.

Mr. Frederick Lake, who will sing at Cardiff on Wednesday, December 8, was one of the first to sing for the B.B.C., his early broadcasts taking place at Marconi House. He is an old Chapel Royal choirboy, and was one of the pioneers who went to France to entertain British troops during the War, where he gave over 2,500 concerts. Miss Constance Westworth, who is singing duets with Mr. Lake, gave the same number of performances in France.

Forthcoming talks:—

Tuesday, Dec. 7.—Captain H. A. Gilbert: 'The Peregrine Falcon.'

Wednesday, Dec. 8.—The Rev. Edward Rees: 'Welsh-English Poets' (Gwilym).

Thursday, Dec. 9.—Councillor W. Deacon, Mayor of Bridgwater: 'The Romance of Radium.'

STOKE-ON-TRENT.

THE Potentia Choral Society, conducted by Mr. Carl Oliver, will, on Wednesday, December 8, give a performance of *Phandrig Crochoer* (Patrick Connor), an Irish ballad by J. Sheridan Le Fanu, and set to music by Sir Charles Stanford. Part of the programme this evening will also be devoted to compositions for violin and piano by Frederick Humphries, who will himself play; Mr. Alby Hull, who is well known in Chester and North Staffordshire, being the solo violinist. The last half-hour of the programme will take the form of a Tabloid Musical Drama, a burlesque written and performed by Frederick Humphries, in which he will demonstrate the value of appropriate music as a sympathetic background for that famous play, *Alice in Wonderland*.

HULL.

A PROGRAMME of chamber music is to be broadcast on Wednesday, December 8, when Miss Guendoline Roe will give a pianoforte recital of modern compositions; her playing was highly appreciated at the Saturday Night Popular Concerts in the city. Miss Doris Cowen (soprano) will sing two groups of songs, while Arthur Johnson's Quintet, well known to local listeners, will be heard in Mozart's *Quartet in G Minor*, Schumann's *Quintet in E Flat Major* concluding the programme.

[Owing to heavy pressure on our space we regret that the Children's Corner is unavoidably held over this week. An important announcement for listeners to the London and Darent Children's Hour will be found on page 506.]

BOURNEMOUTH.

A SHORT Christmas play, entitled *The Cup of Happiness*, will be presented by the Bournemouth Council of Social Service on Monday, December 6. A Cinderella Pantomime is another attraction promised for Saturday, December 11.

Light Russian music will be heard during the afternoon programme on Friday, December 10. Tchaikovsky's *Casse Noisette* Suite, and the Valse from *Eugen Onegin* are included, while the soloist, Mme. Lyda Danilova, will contribute some interesting Russian songs, not often heard.

'That true idleness is deserving of the highest praise' is the subject of a broadcast debate arranged for Friday, December 10. Mr. Hugh Stokes, who will speak in favour of this somewhat surprising proposition, is well known as a writer on art and history. His opponent will be Mr. Riden Bennett, whose talks on eighteenth-century men of letters and the charms of Dorset have given pleasure to many listeners.

Mr. Reginald Remson is to play the Mozart *Piano Concerto in A Major* at the evening concert on Sunday, December 5, when the New Forest Vocal Trio are contributing Negro Spirituals and Old English songs.

Forthcoming talks:—

Tuesday, December 7.—Brigadier-General H. S. Sleman, C.M.G., D.S.O.: 'The Soudan, Past and Present.'

Thursday, December 9.—The Rev. H. T. Hary: 'Winter Sports in Canada and Switzerland.'

BIRMINGHAM.

THE second of the Beethoven Centenary Series of concerts will be given on Sunday afternoon, December 5, when there will be items by Mr. Nigel Dalloway (pianoforte) and Miss Esther Coleman, who will sing two groups of songs.

The first half-hour of the programme on Tuesday, December 7, has been given the interesting title 'Flower and Bird Music,' subjects which have inspired many eminent composers in their finest compositions.

John Overton, author of several radio fantasies, has written a new one called *The Immortal Melody*, which will be produced by Percy Edgar on Tuesday, December 7. The fantasy is in several scenes or episodes, which are described by means of mind pictures.

Some of next week's talks:—

Tuesday, December 7.—Mrs. Loverday Cameron: 'A Country Drive in Switzerland.' 'Chanticleer.' 'Poultry Talk.'

Wednesday, December 8.—Miss Mabel Franco: 'Viewing Life through Canine Eyes.'

Thursday, December 9.—Mr. W. A. Sommers: 'A Famous Novel of the Russian School.'

Friday, December 10.—Miss Estelle Steele-Harper: 'Ye Printer—Hys Mark.'

Saturday, December 11.—Miss R. Fortescue Doris: 'Readings from William Morris.'

PROGRAMME INDEX.

SUNDAY	507, 508, 509, 512
MONDAY	510, 511, 512
TUESDAY	513, 514, 515, 516, 517
WEDNESDAY	518, 519, 520, 521, 522
THURSDAY	523, 524, 525
FRIDAY	526, 527, 529
SATURDAY	530, 531, 532

The Singer and the Song

By Hayden Coffin.

[Listeners and players in London and the provinces who have enjoyed the delightful singing and acting of Mr. Hayden Coffin in many famous musical plays will read with interest his views on the broadcasting of songs.]

THE tendency of modern civilization is to make life as easy as possible. Every day we learn of some new labour-saving device that promises to do a piece of work in half the time that it now takes to do. Not only in business and domestic life do these inventions appear; we have them also in our leisure hours, when entertainment, and not time, is the thing that matters.

In this respect the coming of radio has brought about a marvellous change. Not only is it the medium whereby a great deal of time and labour are saved, but it also enables us to hear many of our greatest artists for practically nothing—the price, in fact, of a wireless set and the usual licence. Twenty years ago, if we wanted to hear a good singer, we had to pay pretty dearly for the privilege. But to-day, nearly all our greatest singers have broadcast at some time or other.

When the London opera season is at its height people are compelled to queue up for hours before they can get a seat. Yet to-day, if they care to listen through the wireless, they will probably hear just as well at home, and certainly more comfortably, although perhaps for the majority of music lovers the appeal of opera by radio may not be so great as when the artists can be seen as well as heard. Nevertheless, were it not for radio, many thousands of people would never realise the beauty of opera as it is sung by some of the finest artists in the world.

The Good Old Songs.

Not very long ago, the B.B.C. had the happy thought of including in their programme a number of old songs that were popular when I was a boy. I am sure that countless listeners must have been delighted to have had their memories revived and appealed to in this pleasant way.

A song's success depends very much on how far it is able to appeal to our emotions. It is much like being shown by a friend a number of family photographs: although you feign interest more out of politeness than anything else, you are really bored to the extreme. But suddenly, perhaps, you recognize the face of a friend whom you had once known, or catch a glimpse of a place where you had once stayed, and then your interest immediately awakens. So it is when we listen to old songs on the radio; only, as I have said, here you can discriminate without hurting anybody's feelings.

It seems to me that the greatest difficulty in the way of the successful broadcasting of songs is the artist himself. No singer who has had any length of experience can be wholly independent of his temperament. Although, personally, I do not pretend to possess an exotic, artistic temperament, yet I cannot help a certain sensitiveness of feeling which forty years of singing before audiences has helped to cultivate. Thus, I feel that when an artist is singing in an empty room to a little black box, he is somehow prevented from giving of his best. It is that magnetic interchange between the singer and his audience—that electric something by which he knows instinctively that he has the sympathy of those who are watching him—which he misses so badly in the broadcasting studio.

However, apart from these disadvantages, I am strongly of the opinion that the radio song has already accomplished a lot for the benefit of both the commercial and the artistic worlds, and that it is destined to accomplish much more. It has brought people into touch with songs which otherwise they would never have heard, and it has given entertainment to those who have never had the opportunity or the money to hear really good singing. These far-reaching advantages must necessarily override the few disadvantages I have mentioned.

How the New Wavelengths Work.

By P. P. ECKERSLEY.

I AM asked to write a short interim report upon the new wavelength scheme. This is a matter of some difficulty, because, writing so soon after the initiation of the scheme, it is somewhat difficult to see the wood for the trees.

The first thing that is shown by the new wavelength plan is that the distant listener finds himself, on the whole, far more favourably placed than he was before, while in many cases the local listener is not so favourably placed. This speaking in terms of majorities, might seem at first a retrograde step, and I want to make it quite clear that, while it was obvious that the plan would benefit the distant listener, it was designed for the future and for the majority, so that countries might develop in terms of fewer wavelengths and higher power.

Taking the Stations in order, Aberdeen and Birmingham appear to be kept very much upon their right wavelengths, as we anticipated. In fact, the maximum error of divergence is something like 70 to 100 cycles, and we think that we can get less than this. It is interesting to find that, listening in Keston, the Birmingham programme can be picked up without interference from Aberdeen in the day time, but at night a jumble programme is received outside a certain zone. Bournemouth appears to be a little stronger when listeners tune in their sets, and this applies to most of the stations which have reduced their waves.

As to the relays, these are functioning much as we thought they would. Of course their range has been considerably cut down—of that there can be no doubt—but listeners generally, in a city where the station is located, seem to be satisfied with the service, since it has not greatly changed. There is probably less interference on the relays which are sharing a British wave among themselves, than on those which are sharing an international common wave.

There has been one considerable trouble with London, where trouble was least expected. The station of Leipzig has been interfering with London

by being something like 5 kilocycles off its wavelength on two separate occasions in three nights. This is a matter which no doubt will be put right very soon. We have telegraphed to the International Office about this, have verified the wavelength of London by three different methods, and are certain that it, at any rate, is correct.

I can only repeat, in concluding this little report, that anticipations are being realized, and we do ask those who find that their normal service is interfered with, to rely upon Daventry. We have been right in supposing that the efficiency of this station has been largely improved, and from the definite measurements that we have taken, we believe that the station is now considerably more effective than it was before the wavelengths were changed. Let those, therefore, who are dissatisfied with the service that they have normally been getting, concentrate upon Britain's high-powered station, from which they will get, we think, an adequate programme, and certainly a powerful signal.

As with the adoption of the new Wavelength Scheme all British relay stations (except Leeds and Bradford, which are working on international common wavelengths) will henceforward be working on the same wavelength of 2835 metres, the programmes of Southern relay stations will no longer be published in the Northern Edition of THE RADIO TIMES, nor the programmes of Northern relay stations in the Southern Edition. The present wavelengths are as follows:

Aberdeen	481.5
Birmingham	465.4
Glasgow	326.1
Belfast	203.4
London	312.5
Newcastle	284.6
Manchester	308.1
Bournemouth	333
Cardiff	297
Leeds	284.1
Bradford	285.5

Wireless for Hospitals—A National Survey.

IT is now just on two years since I had the honour to broadcast from London to all stations in the British Isles my appeal for the installation of wireless in all general hospitals, eye hospitals, cottage hospitals, convalescent homes, and similar institutions throughout the land.

We have been told what has been done in London hospitals—a splendid movement which was started by the *Daily News* some five months later than my national scheme. I should like to place before the country the exact results of the older and more widespread effort, and to that end I invite the secretaries of all such institutions as I have enumerated to forward to me, at the address below, the following particulars: (1) Amount of money raised for their local wireless fund. (2) Number of beds and wards equipped in their local hospital or hospitals. (3) Date when their local fund was inaugurated.

Having received this information, I will ascertain the very interesting total, and forward details to *The Radio Times* and to the Press generally.—KINDS HOWARD, 2, Brunswick Place, Hove, Brighton.

Understanding Big Ben.

It is probably not generally known to the average listener, when he hears the familiar voice of Big Ben, that the correct time is indicated by the first stroke of the hour—not by the quarters. It may often happen, however, that the listener is not prepared, watch in hand, to catch the first stroke, but comes in when "Big Ben" is already telling his tale. In that case it is necessary to time the last stroke carefully and deduct five seconds for each of the other strokes. For instance, if your watch shows 7—0—45" at the last stroke, you are 45" fast, less 5 x 5, or 30"—that is to say, fifteen seconds fast. The answer to the question, "How is one to know which is the last stroke till it's too late to snap it?" is, of course, time all the strokes till you have snapped the last one. The quarters take about three seconds each to reel off. So if you happen to catch the last stroke of the three-quarters chime, you can deduct about ten seconds.—A. DE NORMANVILLE, The Park, Ealing.

Listening to the Continent.

THE other evening I found atmospheres very annoying in my three-valve set, and, moreover, after ten o'clock, there was nothing to listen to in England, other than varieties of jazz (of which we seem to have had an unfair amount lately). In despair, I tried for German stations and at 10.15 picked up Frankfurt-on-Main, just as the announcer was giving out the first item of a musical programme. The announcer's words came through with unusual clearness, and for three-quarters of an hour I listened spellbound to one of the most delightful vocal and instrumental concerts I have enjoyed for many a long day! The audition was wonderfully pure and perfect, marred only by a few findings. In view of the multitude of beautiful compositions which are heard on the Continent, but do not seem to reach England, would it not be worth while for one of the B.B.C. staff to listen to Continental concerts, and select for importation and performance in British broadcasting studios some of the many gems which are apparently unknown to the organizers of our British concerts?—"AN OVERSEAS VISITOR," Herts.

The Horn and the Trumpet.

MR. V. HOLY HUTCHINSON, in the fifth of his interesting articles entitled "Story of the Orchestra," published in your issue of October 29, writes as follows: "The horn and trumpet have low fundamental notes and can produce about the first sixteen harmonics; the trombone can produce eight, or, with perseverance, ten."

I venture to point out that to couple the trumpet with the horn in this way is contrary to experience. As regards the number of harmonics that can be

A FILM STAR AT THE MICROPHONE.

Mr. Richard Barthelmess, the American film star, photographed at the microphone in the London Studio, from which he recently gave listeners his first impressions of England.

produced, or, in other words, as regards the compass of the instrument, the horn is unique among brass wind instruments in being capable of producing sixteen harmonics by variation of pressure of the human lips, and parts written for this instrument sometimes call for the production of the sixteenth harmonic. The trumpet should, in this connection, be coupled rather with the trombone. For either of these two instruments parts are seldom written for a higher harmonic than the eighth, but good players on either instrument are able to produce nine or ten harmonics, and an exceptional player eleven. The open harmonics on the trumpet are, of course, an octave higher than on the trombone.—H. A. WATSON, Quatt Park Road, Streatham Hill, S.W.2.

[Mr. Holy Hutchinson writes: I am indebted to your correspondents for having written to point out a misleading statement in the fifth of my articles on the Orchestra. Might I be allowed to amend the statement to which he refers? I should have written: "The trumpet, a hundred years ago, had a low fundamental note and could produce the first sixteen harmonics, but since then its construction has been modified, its fundamental note is an octave higher, and it can produce the first eight or ten harmonics only."]

London Bells That Carry Far.

THE following extract from a letter which I have recently received from a German friend residing in Zwickau-Schledowitz, in Saxony, may be of interest to your readers:—

"Since last March I have been a listener to broadcast programmes. My son built the apparatus himself, and we get a wonderful reception from all stations both in Germany and abroad. For example, last Sunday at 9 p.m. I heard the bells of St. Martin-in-the-Fields in London, and as the peal finished, the organ and the singing in the church began; after that came the sermon. Everything was so loud and clear that we easily forget the distance which separated us. As I possess a lively imagination, it wasn't hard for me to imagine myself in London. Avoiding the noise of the busy thoroughfares, I wandered through the quieter and darker streets and alleys of the city until I found myself before the door of the old church. This picture may not correspond at all to the facts, but such a picture was presented to my imagination by the sound of these church bells."—J. H. REYNOLDS, Woodfield Road, Cheshire Hulme Cheshire.

LIVING here in Debreczen, Hungary, we have a nine-valve set, and with frame aerial and loud-speaker we can get all the English stations. I am British born and married to a Hungarian, and I cannot tell you how my heart beats at the sound of How Bells. It's such a homely sound. My husband, who speaks English very well, delights in the English programmes. My little daughter, two and a half years old, listens to the Children's Hour. Thanks to broadcasting, I have a link with the Old Country the value of which I cannot express in words.—(MRS.) LUKAS MAYER, Istvánórzslalom, Debreczen, Hungary.

I was crossing St. James's Park, London, the other day, with a friend from Portugal, when Big Ben struck the hour. Believing it would be of interest, I pointed out the fact to my friend. "What," he exclaimed, "that Big Ben; why, it's louder in Lisbon!"—A B.B.C. FRIEND.

BIRTHDAY GREETINGS.

A New Scheme for London and Daventry Children.

IN order to give more time for programme items, and to lessen the amount of time given to birthday greetings, it has been decided that after December 1 the names of "birthday children" shall be read (to the number of 100 per day, as at present), but that no "hidden present" instructions shall be given. There are many people who would like the birthday greetings done away with altogether. There are many who like them. This is an attempt to please both sorts.

little later as a Cello and Viola part. Out of these the Movement grows.

The SECOND MOVEMENT (Fairly slow) is meditative. It is somewhat complex in its structure, and calls for sympathetic and attentive listening if its beauty is to be realized.

The THIRD MOVEMENT (Moderately quick and gently) begins with Oboes, Clarinets, and Bassoons—alone, except for the Cello, plucking arpeggio passages. So far, we have a sort of quick Minuet, three-in-a-bar, but a quick passage, four-in-a-bar, soon follows (it begins for Strings alone, as a contrast to the preceding portion for Wind alone). Out of these two happy little tunes the Movement is largely made.

The FIFTH (Quick and spirited) opens with a long-breathed swinging tune for Strings. The Second Main Tune is also for Strings alone, rather slowly, with a syncopated (or ragtime) repetition of a note.

more of Julius Caesar on the occasion of the Shakespeare Tercentenary celebration in 1916, and in 1905 he gave a command performance of *The Merchant of Venice* before King Edward at Sandringham; but he has probably never played to more enthusiastic audiences than those that yearly enjoy his acting as Long John Silver in his Christmas productions of *Treasure Island* at the Strand Theatre.

many, of course, to the city of Cracow. A century has nearly gone by since Chopin earned for Poland a distinctive place in the world of music. We have had to wait some time for another Polish composer approaching the calibre of Chopin, but there is now a promising group of composers known as "Young Musical Poland." Of these, Szymanowski is the most familiar—at any rate in England. Ludomir Rozyccki is another important figure in the group. He was born in Warsaw forty-two years ago.

A photograph of the recent Dedication Service of the Liverpool Cathedral organ. This service, it will be remembered, was broadcast, and the microphone can be seen suspended on a wire near the centre of the picture. The organ will be heard this evening in the London programme.

5.30-5.50 app. ARTHUR BOURCHIER will read a short story in eleven chapters, "Handsome Is As Handsome Does," by Bret Harte.

MR. ARTHUR BOURCHIER began his stage career in his Oxford days, when, as an undergraduate at Christ Church, he took a prominent part in founding the Oxford University Dramatic Society, which has since given so many recruits to the professional stage. He has had an active and varied career as actor, manager, and producer, and has appeared in many famous plays and many historic parts—for instance, he was Brutus in the all-star perform-

MR. ARTHUR CRANMER

the popular baritone, who will contribute some songs to the London programme this evening.

8.55 THE WARE'S GOOD CAUSE: Victoria Hospital for Children. Appeal by Mr. OWEN NARES

THE Victoria Hospital for Children celebrated its Diamond Jubilee last week, when Sir Johnston Forbes-Robertson presided at the jubilee dinner and appealed for funds, for unfortunately the wonderful work that the hospital has

done for so long is now menaced by financial embarrassments dating from the time of the war. At present it maintains 180 beds at the hospital in Chelsea, and a convalescent home (itself fifty years old) at Broadstairs, as well as treating over 70,000 out-patients a year.

Mr. Owen Nares, who makes the appeal, is one of the most popular actors on the London stage. Some of his best-known parts have been Peter Bannan in *The Cherry Orchard*, Mark Selous in the dramatic version of *If Winter Comes*, and Julian Beauchamp in *Diplomacy*. He is at present appearing at the Playhouse in *Remorse*.

The address to which donations should be sent is The Victoria Hospital for Children, Tite Street, Chelsea, S.W.3.

STATION SYMPHONY ORCHESTRA, conducted by WARWICK BATHURST

IN 1866 Cardinal Newman

wrote the poem, *The Dream of Gerontius*, inspired by his thoughts as he sat by the death-bed of a friend. It pictures the dream of a dying man as he anticipates what lies beyond and (in the second part) his soul's experiences after his dissolution. Even, himself of the same faith as Newman, long afterwards set the poem to music, and his setting had its first performance in 1908, at the Birmingham Festival.

LLANDAFF CATHEDRAL.

The Evensong from this famous Cathedral will be broadcast this afternoon at 3.30 from the Cardiff Station.

PROGRAMMES FOR SUNDAY (November 28)

In the First Part of the work we hear GERONTIUS (Tenor), the PRIEST (Bass), and ASSISTANTS (Chorus). The music opens with a very beautiful Prelude, and then follow solo and chorus passages as detailed below—

GERONTIUS: 'Jesus, Maria, I am near to death.'
ASSISTANTS: 'Kyrie Eleison.'
GERONTIUS: 'Rouse thee, my fainting soul.'
ASSISTANTS: 'Be merciful, be gracious; spare him, Lord.'
GERONTIUS: 'Sanctus fortis, Sanctus Deus.'
GERONTIUS: 'I am no sinner.'
ASSISTANTS: 'Blessed art, O Lord, in this his evil hour.'
GERONTIUS: 'Nuncius hinc est, 'Into Thy Hands, O Lord.'
THE PRIEST: 'Go forth upon thy journey, Christian soul, 'Professors, anime Christiani.'
ASSISTANTS: 'Go, in the name of Angels and Archangels.'

9.0 WEATHER FORECAST, NEWS: Local News

9.15 ELGAR'S 'DREAM OF GERONTIUS' (Part II.)

Relayed to Daventry

In the Second Part we hear THE SOUL OF GERONTIUS (Tenor), GUARDIAN ANGEL (Mezzo-Soprano), THE ANGEL OF THE AGONY (Bass), and DEMONS, ANGELICALS, and SOULS (Chorus). It opens with a brief Introduction, and then follow—

SOUL OF GERONTIUS: 'I want to sleep; and now I am refreshed.'
ANGEL: 'My work is done, my task is o'er.'
DIALOGUE ANGEL and SOUL: 'All hail, my child and brother, hail.'
DEMONS: 'Lowborn clods of brute earth.'
ANGEL: 'It is the restless pining of their being.'
DEMONS: 'The mind bold and independent.'
DIALOGUE SOUL and ANGEL: 'I see not those false spirits.'
ANGELICALS: 'Glory to Him.'
ANGEL: 'They sing of thy approaching agony.'
SOUL: 'But hark! a grand mysterious harmony!'
ANGEL: 'Aid now the threshold, as we traverse it, utters aloud its grand responsive chant.'
ANGELICALS: 'Praise to the Holiest in the height.'
DIALOGUE ANGEL and SOUL: 'Thy judgment now is near.'
ANGEL OF THE AGONY: 'Jesus! by that shoulder, ing death which fell on Thee.'
VOICES OF EARTH: 'Be merciful, be gracious, spare him, Lord.'
ANGEL: 'Praise to His Name.'
SOUL: 'Take me away.'
SOULS IN PURGATORY: 'Lord, Thou hast been our refuge.'
ANGEL: 'Softly and gently, dearly consumed soul, I now enfold thee.'
SOULS: 'Lord, Thou hast been our refuge.'
ANGELICALS: 'Praise to the Holiest.'

4.0 TIME SIGNAL, GREENWICH, The R.A.C. Dance Band from the Royal Automobile Club

4.15 Mr. A. W. P. GAYFORD: 'Makers of Modern Europe—Gambetta.'

GAMBETTA, more than any other man, made the Third French Republic, brought it safely out of the stress and storm and peril of 1870, and guarded it until, at his death in 1882, it was established and secure. It was he who, after the great disaster of Sedan in the Franco-Prussian War, declared the Republic to replace the fallen Empire, and became Minister of the Interior in the Government of National Defence. Later, when the siege of Paris had begun, he escaped from the fortified city in a balloon, and performed prodigies in raising armies to continue the war. All his efforts could not, of course, prevent a humiliating peace; but he was returned to the assembly in July, 1871, and his great influence helped enormously when it was directed in support of the Government—to strengthen the Republic against its many enemies. His subsequent career was chequered and stormy; he was twice imprisoned for political offences, and then again he led a Ministry until the year of his death; but throughout his vicissitudes his influence, both in France and with foreign observers, remained of paramount importance, and none of his many errors can detract from his reputation as, in a sense, the father of modern France.

9.30 The Rt. Hon. Lord ASKEW, K.C.B.: 'The Quaintness of Inventions' (Under the auspices of The Institute of Patentees)

THIS talk is being given under the auspices of the Institute of Patentees, of which Lord Askew was President last year. He has also been President of the British Science Guild, Arbitrator in many industrial disputes, and Chief Industrial Commissioner from 1911 to 1913.

9.45 SCHUBERT

Fourth Week—Pianoforte Sonatas

Interpreted by EDGAR BAINTON

Sonata in C Minor, Op. Posthumous (First Part); Allegro, Adagio, Menuetto.

IF you were to look through the programmes of all the high-class concerts given in London during a season, you would gather that one of the favourite composers of the world was Franz

Schubert. You would also find that it was the singers that did most to keep his name alive. There would be a few orchestral performances of his *Unfinished Symphony*. Here and there a Chamber Music party would be playing his *First Quintet*. Pianists would, very rarely, play one of his smaller pieces, or a long Fantasia called *The Wanderer*. The rest would be songs. The vogue of the songs is reasonable, for Schubert was the greatest of all song-composers. But the almost total neglect of Schubert's Piano Sonatas is unjust, for these works, of which he wrote ten, contain a great deal of original and beautiful music.

A common objection to Schubert's larger instrumental works, such as these, is their excessive length—or rather a certain long-winded habit of which Schubert was sometimes guilty in laying out his thoughts; the music, they say, is spread rather thin. Occasionally, it must be admitted, the objection holds. But it is no good reason for

Mr. EDGAR BAINTON.

who will play Schubert's sonatas in the evening Classical Recitals this week.

not playing those works of Schubert to which it does not apply, and of these there is no lack of examples in Mr. Bainton's programme for the week. The work with which Mr. Bainton opens his recitals is one of the most individual in the series. The abrupt opening bars and the rushing passages that follow set the tone of the *First Movement* (quick), in which storm and calm are brought into contrast, with storm predominating. The *Andante* (Slow Movement) opens with a hint of Schubert's gift of melody-making. As it proceeds, we discover that what promised to be an idyll expands into a romantic Ballad, at times heavy with conflict.

The *Menuetto* is a Minuet only in so far as it keeps to a steady triple beat and is formal in its general design (i.e., first section—second section—first section again). As a piece of musical expression it is disturbed and plaintive.

OPERATIC

THE STATION ORCHESTRA, conducted by JOSEPH LEWIS

Overture to 'Euryanthe' Weber
Selection from 'Rigoletto' Verdi

WEBER was commissioned to write a new Opera for a Vienna theatre because of the success of his *Der Freischütz* (The Marksmen). He looked at several plots, but discarded them for the work of an eccentric woman author, Helmina von Chenev (who, as the writer of the libretto of Schubert's *Rossamunde*, was largely responsible for that work's failure). Together he and Weber selected a plot from a thirteenth-century tale of chivalry, full of ghosts, fairies and such-like legendary folk. The librettist surpassed himself in producing a particularly fatuous libretto, and the work did not for long retain its place in the operatic repertory.

The Overture, according to Weber's characteristic plan, contains forerunners of the Opera's leading airs. Its brilliant opening depicts the background of chivalry against which the drama is unfolded.

The First Main Tune comes very soon, played by the Wind. It is taken from an air in the Opera in which the hero, Adolar, declares his confidence in Heaven and in his Euryanthe.

A sweetly-flowing Violin melody forms the Second Main Tune. This comes from another air sung by Adolar when he is happy at the prospect of being united to Euryanthe.

Now, an air of mystery is created by a fine passage for eight Solo Violins, muted, with a trembling accompaniment by the Violas, also muted. Weber thought that it would help to elucidate the plot if at this point in the Overture the curtain were to rise upon a tableau showing an important incident which in the drama was only narrated, not acted. The stage manager and the author combined to overrule him, so this strange experiment has never been tried.

Sonata in C Major (Concluded)

Sonata in E Flat Major Op. 1

THE ALLEGRO forms the fourth movement of the C minor Sonata, and is a work of great power and beauty. It is a more polished type of music. Those who are familiar with the early works of Beethoven will recognize that the First Movement (Allegro) of the Sonata shows a certain affinity to their type. The movement as a whole is an example of straightforward Sonata-writing, with the usual two Main Themes in appropriate contrast.

THE SONATA IN E FLAT has none of the emotional or other characteristic traits of the work which has preceded it. It is a more polished type of music. Those who are familiar with the early works of Beethoven will recognize that the First Movement (Allegro) of the Sonata shows a certain affinity to their type. The movement as a whole is an example of straightforward Sonata-writing, with the usual two Main Themes in appropriate contrast.

THE MARTYRDOM OF ST. ANDREW

Marillo's masterpiece, which hangs in the Prado Museum in Madrid shows the Saint hanging on a cross whose shape is known today as the St. Andrew's Cross. It is this cross which represents Scotland on the Union Jack.

ST. ANDREW'S DAY PROGRAMME (November 30)

St. Andrew of Scotland

ALTHOUGH St. Andrew is universally known as the Patron Saint of Scotland, it is not to be said that in these days he does not seem to be regarded with any very high degree of enthusiasm or affection in the country which is supposed to enjoy his special interest and protection. In Scotland to-day the Saint is vaguely associated with the town of St. Andrews and with a particular shape of cross, but that his name once carried a very real influence may be judged from the number of institutions, societies and public buildings, both sacred and secular, which bear his name at the present day.

Not even a truly one-eyed man could fail to be struck by the regard for their national poet—Bobbie Burns—implied or expressed, than for the dim figure of their national Saint. Burns lived their own life and expressed their joys and sorrows in his songs, and it is not surprising that whenever Scotsmen are gathered together on a particular day of the year, the name of Robert Burns is made the reason for much festivity and self-congratulation.

There is not a great deal known about St. Andrew, but what there is undoubtedly stamps him as having been a very remarkable man. He was a younger brother of Simon Peter, and according to tradition was responsible for introducing his brother to Jesus. Like St. Peter, he was a fisherman, and he seems to have been a disciple of Jesus the Baptist before transferring his allegiance to the Greater Prophet. All the references to St. Andrew in the New Testament indicate that he was a man of generous nature who thought of others before himself, and there is reason to believe that he was held in particular respect by his fellow disciples.

There are various traditions about St. Andrew's later life, some of which are obviously apocryphal, but he evidently travelled a good deal, preaching the Gospel, and Eusebius, the Church historian of the fourth century, says that he became a missionary to the Scythians, an obscure northern people. We need, however, to be on sure ground when we are told that he was sacrificed at Patras by order of the Roman Pro-Consul of Achaia during the reign of Nero, on November 30, the day which is now dedicated to his memory. There is, unfortunately, no means of verifying either the exact year or the day of his death, but supposing him to have been quite a young man when he became a disciple of Jesus, he must have been in the prime of life at the time of his martyrdom.

It is curious how St. Andrew came to be identified with Scotland. The tradition is that a certain St. Regulus or St. Roke, who was a native of Patras and lived in the fourth century, brought some of the Saint's bones to Fife, in Scotland, and buried them beneath the spot where the ruins of St. Regulus Cathedral now stand in the town of St. Andrews. The shape of the cross which is identified with St. Andrew is supposed to have its origin in the fact that he was crucified on a cross of this form, but this, again, is only traditional. St. Regulus seems to have taken a very circuitous route when bearing the bones of the Saint across Europe, stopping both in Hungary and Russia on the way, which may account for the fact that St. Andrew is also regarded as the Patron Saint of both these countries. Throughout the English-speaking world, however, he is always identified solely with Scotland.

Although the personality of St. Andrew may not be a living force to-day, his name is not wholly forgotten, and when we think of him as one of that small band of men who forebore all and followed the Great Teacher, and at the end fell a martyr to his convictions, it is fitting that his memory be preserved not alone in Scotland, but in every Christian country.

Reel, 'The Devil Among the Tailors' } Traditional

Programme Notes

THE items in to-night's special programme have been contributed in varying measure by the four Scottish broadcasting stations, and have been chosen with the intention of showing as many types of Scottish art as can be broadcast in the space of ninety minutes. Most of the songs chosen are traditional in melody, and represent various facets of Scottish character. The old Jacobite sentiment is represented when the prowess of the hero of the papers at Carlisle Ha is sung. 'The Rowan Tree' tells of the typical Scottish love for the simple things of the home countryside and for the memories of the folk which they recall. Burns, it may be noted, wrote his songs to existing tunes, and in the case of 'Aye Waulkin O' his poem is just a rewording of older verses. All the Burns songs in the programme to-night show him at his best as a pioneer in the introduction of humour and simple direct passion into the poetry of his time. The familiar melody of 'Ye Banks and Braes'—the black-note tune—was in the time of Robert Burns always associated with the Caledonian Hunt.

A great many tunes for the bagpipes are called after particular persons; Chieftains, Colonels of Scottish regiments, popular figures in the Clan and so forth, whose names have titles which to a listener south of the Tweed may sound new. To-night we shall hear three of the best, 'My Home', via, the Strathspey 'Maggie Cameron', probably called after a lady friend of the piper who wrote the tune; 'Monymusk', a Strathspey named after the village in Aberdeenshire of this name for many years this has been the Regimental Trot of the Scots Greys; and 'The Devil Among the Tailors', which next to 'The Reel of Tulloch', is probably the most popular of all reels. This title, of course, is quite fanciful, but the tune is undoubtedly very good.

It may interest some listeners to know that the bagpipe scale is fixed, and is not by any means the diatonic—in fact, it is not possible to relate it to any known scale. It has a rather archaic character by reason of the addition of a note to what is approximately the Major Scale of A. The three drones are all tuned to A, which is the keynote of the chanter.

The Gaelic Choir, which is taking part in that part of the programme which is being relayed from Edinburgh, consists of twenty voices. They will sing us several songs for mixed voices, one for female voices and one for men's voices alone. Two of their songs, 'Far an robh mi'n fear' and 'Clann nan Gaidheal' (The Highlanders)—are set to words by Neil MacLeod, the famous nineteenth-century bard of the Island of Skye. 'The Eriskay Love-Lull' is, perhaps, the most popular of all the Hebridean songs collected from the fisherfolk of the isles by Mrs. Kennedy-Fraser. This version of this exquisite love-lull is the work of Hugh Robertson, the conductor of the famous Orpheus Choir. 'Rory's Coat' is a quaintly humorous song in which a tailor expresses his disappointment that his strenuous labour in making a handsome jacket for a customer has met with such scant reward.

Dr. James Devon, who is acting as compère throughout the evening, is one of H.M. Prison Commissioners for Scotland. Scottish listeners will remember his delightful comments on the programme that was broadcast on St. Andrew's night last year. He is always greatly in demand for Burns' Night Speeches and similar occasions, and is a model of the good Scots chairman. He is widely known not only as a patriotic Scot and learned antiquarian, but as a humorist of a type which somehow or other is bred only north of the Tweed.

SCARCELY any Opera is better stocked with
good tunes than *Carmen*, written by the
Frenchman Bizet (1838-1875), less than a year
after he died. Although he dramatic thread of
the music and of the plot is not so strong as in
other Operas, the music is so good that it is
worth listening to for its own sake.

The music is well adapted for performance
away from the stage. About half of it appears
in the present performance, which will concentrate
the best parts of the Opera into little more than
an hour. The following are the parts which will
be sung and danced as to the

(1) The Overture based on a March of bull-
fighters in Seville and the well-known Toreador's
March.

(2) A Chorus of Seville in the square at
dusk.

(3) A Chorus of Street Boys in the square at
dusk.

(4) The Seville girls and boys in the square at
dusk.

(5) Carmen, a beautiful gypsy one of the cigar
girls, sings the famous Habanera, much pro-
duced by a smart young Briandier Don José, who
is looking on. At the end of it she throws him
out.

(6) Don José (Tenor) is in the square at
dusk.

(7) Carmen's witcheries. But there enters
Micaela (Soprano), his old school playmate, with
a message that his mother is weakening and needs
him.

(8) Carmen is taken into custody for
drawing a knife on one of the other girls. Don
José is with her, but she bewitches him
completely this time, and he renounces all
escape. For this he is sent to prison.

(9) In a tavern on the outskirts of Seville, the
meeting-place of a band of smugglers, Carmen
and her associates sing a lively song.

(10) Don José, after his month in prison, comes
to meet Carmen. What she is singing to him is
a lusty lullaby to lull him back to sleep.

(11) Don José, who has been in search of Don
José, sings of her hapless journey.

(12) A Chorus of Smugglers in their mountain
hideout.

(13) Smuggler girls are telling their fortunes by
cards. Carmen reads her own and finds death,
for herself and her lover.

(14) Micaela, who has been in search of Don
José, sings of her hapless journey.

(15) A Chorus of Smugglers in their mountain
hideout.

(16) Don José, who has been in search of Don
José, sings of her hapless journey.

(17) A Chorus of Smugglers in their mountain
hideout.

(18) Don José, who has been in search of Don
José, sings of her hapless journey.

(19) A Chorus of Smugglers in their mountain
hideout.

(20) Don José, who has been in search of Don
José, sings of her hapless journey.

(21) A Chorus of Smugglers in their mountain
hideout.

(22) Don José, who has been in search of Don
José, sings of her hapless journey.

(23) A Chorus of Smugglers in their mountain
hideout.

(24) Don José, who has been in search of Don
José, sings of her hapless journey.

(25) A Chorus of Smugglers in their mountain
hideout.

(26) Don José, who has been in search of Don
José, sings of her hapless journey.

(27) A Chorus of Smugglers in their mountain
hideout.

(28) Don José, who has been in search of Don
José, sings of her hapless journey.

(29) A Chorus of Smugglers in their mountain
hideout.

(30) Don José, who has been in search of Don
José, sings of her hapless journey.

(31) A Chorus of Smugglers in their mountain
hideout.

(32) Don José, who has been in search of Don
José, sings of her hapless journey.

(33) A Chorus of Smugglers in their mountain
hideout.

(34) Don José, who has been in search of Don
José, sings of her hapless journey.

(35) A Chorus of Smugglers in their mountain
hideout.

(36) Don José, who has been in search of Don
José, sings of her hapless journey.

(37) A Chorus of Smugglers in their mountain
hideout.

(38) Don José, who has been in search of Don
José, sings of her hapless journey.

(39) A Chorus of Smugglers in their mountain
hideout.

(40) Don José, who has been in search of Don
José, sings of her hapless journey.

(41) A Chorus of Smugglers in their mountain
hideout.

(42) Don José, who has been in search of Don
José, sings of her hapless journey.

(43) A Chorus of Smugglers in their mountain
hideout.

(44) Don José, who has been in search of Don
José, sings of her hapless journey.

(45) A Chorus of Smugglers in their mountain
hideout.

(46) Don José, who has been in search of Don
José, sings of her hapless journey.

(47) A Chorus of Smugglers in their mountain
hideout.

(48) Don José, who has been in search of Don
José, sings of her hapless journey.

(49) A Chorus of Smugglers in their mountain
hideout.

(50) Don José, who has been in search of Don
José, sings of her hapless journey.

(51) A Chorus of Smugglers in their mountain
hideout.

(52) Don José, who has been in search of Don
José, sings of her hapless journey.

(53) A Chorus of Smugglers in their mountain
hideout.

(54) Don José, who has been in search of Don
José, sings of her hapless journey.

(55) A Chorus of Smugglers in their mountain
hideout.

(56) Don José, who has been in search of Don
José, sings of her hapless journey.

(57) A Chorus of Smugglers in their mountain
hideout.

(58) Don José, who has been in search of Don
José, sings of her hapless journey.

(59) A Chorus of Smugglers in their mountain
hideout.

(60) Don José, who has been in search of Don
José, sings of her hapless journey.

(61) A Chorus of Smugglers in their mountain
hideout.

(62) Don José, who has been in search of Don
José, sings of her hapless journey.

(63) A Chorus of Smugglers in their mountain
hideout.

(64) Don José, who has been in search of Don
José, sings of her hapless journey.

(65) A Chorus of Smugglers in their mountain
hideout.

(66) Don José, who has been in search of Don
José, sings of her hapless journey.

(67) A Chorus of Smugglers in their mountain
hideout.

(68) Don José, who has

6.10 A SYMPHONY CONCERT

ARTHUR CATTERALL (Solo Violin)
 THE AUGMENTED STATION ORCHESTRA
 Conducted by T. H. MORRISON

Overture to 'Egmont'..... Beethoven

GOETHE wrote a play upon the heroic life and tragic end of Count Egmont, the patriot who, after the war between Spain and the Netherlands in the sixteenth century, was beheaded, along with Count Horn, by the brutal Duke of Alva.

To this play the poet's friend Beethoven composed an Overture and incidental music. In the Overture the impetuous pride and heroism of Egmont are finely suggested.

9.0 **RADIOITIES COMPETITION**
 Conducted by Mr. ERN SHAW.

An interesting competition has been arranged this evening for the many Hull listeners who wish that they could draw. In addition to them an opportunity to help a most deserving cause—the Christmas Dinner to the Bazaar Fund.

Mr. Ern Shaw, the popular Cartoonist, will broadcast simple instructions which, carried out on a specially prepared chart, will result in a humorous drawing appearing on the squared paper. Competitors of all ages are invited to send in their efforts, and the nearest of them with the most ingenious 'last lines' to a limerick accompanying the subject will win handsome prizes, presented through the kindness of the Editor of the Hull Evening News.

Order for 6d. The whole of the proceeds will be handed over to the fund.

9.30-11.0 S.B. from London (10.10 Local News)

I ... } John Lewis (Brown's Husband)
J. EDWIN PARRY
- SCENE 1.** A typical Welsh kitchen, which is also the living-room of the Lews' cottage. Brown is a bustling, capable housewife, whose thoughts rarely venture outside her own household. Her sister, Mary, is of very different mentality. Her restless spirit is warmed by the fire of youth and enthusiasm. She has wit, brains and some nervous quality in her cosmos that has yet to develop. Thomas John is a poor creature without initiative whose thoughts and actions are dependent on the strong will of his better half. It is 11.0 a.m. Brown is preparing dinner. Mary enters and the Play begins. Scene 2. Seven busy years have rolled away and thanks to Brown's business instincts, Thomas John has prospered. In the sitting room of their smart new villa, Brown awakes to the arrival of Henry Brown, a famous author who is presenting a Young People's Institute to the Town. Tom enters and the Play continues. Overture, 'The Hobbit'

It was on December 2, 1894, that Robert

Louis Stevenson was struck down on the

veranda of his house at Yailma, in Samoa,

with apoplexy, and the same evening he died.

Only a year before he had published two of his

most important books, 'Treasure Island' and 'The

Island King'.

ments, a volume that included in 'The Begging Imp,' one of the great short stories of the world's literature. It would be hard to find a writer of romances who enjoyed so great a contemporary reputation as Stevenson, and who left behind him a considerable cult, the survival of which is demonstrated by the still increasing demand for cheap editions of his works. Although his fame was made by 'Treasure Island,' 'Kidnapped,' and similar stories, his essays became equally popular and in addition he has left in his 'Defence of Father Damien,' a piece of English worthy to rank with the best of Swift's 'Draper's Letters' as a model of strong, virile, controversial prose.

DONK AND DEB CROSS TALK

IRVING BROWN of Music Comedy Fair

Lord & Fox

Mr. J. W. ROBERTSON SCOTT,

whose Talk in the London Studio this evening at 7.40 on the Month's Reviews will interest all listeners who wish to keep themselves in touch with the progress of events.

9.30 SIR EDMUND GOSSE, C.B.: Robert Louis Stevenson

SIR EDMUND GOSSE is one of the Old Guard of English literary criticism. His first prose writings were published so long ago as in 1879, and since then he has established a solid reputation as a critic of wide learning, impartial judgment and discriminating taste. His books include biographies of Gray, Donne, Jeremy Taylor, Congreve, Swinburne and Sir Thomas Browne, and his latest volume of essays was 'Salmonettes,' published last year.

9.45 SCHUBERT

Interpreted by EDGAR DAINTON

Sonata in B Flat Major, posthumous work (First Two Movements)

Molto Moderato Andante Sostenuto

SCHUBERT considered that there was a clear difference between Schubert's earlier sonatas and the three which are said to have been his last compositions. In these last three (of which to-night is the third) Schubert found a greater simplicity of invention, and a cheerful surrender of every effort to be thought brilliant and original.

The First Movement of this Sonata in B Flat (at a very moderate pace) is a long piece in itself. It opens with a very soft, sustained melody, smooth and grave, perhaps even mystical. It is long before we pass on from the First Main Theme. Perhaps a real change of mood would

destroy the power of the whole Movement. Any rate, there is never any real break in the contemplation—the Second Main Theme is very closely akin to the First.

The Second Movement, being already sustained, continues the deep thought set out by the First. The Main Section is characterized by a distinctive rhythm which persists throughout. A Middle Section consists of one long, simple melody.

10.0 TIME SIGNAL, GREENWICH: WEATHER FORECAST, SECOND GENERAL NEWS BULLETIN; Local Announcements

10.15-11.0 A POPULAR PIANOFORTE CONCERTO

Interpreted by THOMAS

Piano Concerto in G Minor Sent 9.4

(CONCERNING this Concerto it is said that Rubinstein, the great Pianist, suggested that Saint-Saëns and he should together appear in a concert as Soloist and Conductor respectively. There were three weeks before the event was due, and the Composer promised to write a new concerto for the occasion. He did it easily, with several days to spare, and, as ever, played his work like one who was now to hear) brilliant. It is in three distinct Movements.

The FIRST MOVEMENT, beginning with a slow introduction, goes up to the dimension of notes in turn (quasi) and on.

The SECOND MOVEMENT (quick and playful) is a wistful piece of work. The opening—pulsed strings, in an undercurrent of their rhythm—is a very way of leading up a Movement. The Piano sets its cap to the

The THIRD MOVEMENT (the First) is a very lively piece, in the style of the first. The Trio tells the

IMPROVED C.A.V. 1927 MODEL H.T. ACCUMULATOR

EXPERIENCE in manufacturing Accumulators for the past 35 years has gone towards perfecting our IMPROVED 1927 model H.T. Accumulator, the exclusive features of which are as follow —

1 LONG RETENTION OF CHARGE.

This is a super-charged battery, it being given several cycles of charge and discharge during the initial charging process. By this method retention of charge over a long period is obtained.

2 NO INTERCELL CURRENT LEAKAGE.

Owing to high internal voltages it is very important that inter-cell current leakage is prevented. This is effected by each cell being air spaced from the adjoining cells and securely held at the base, providing a maximum air space of 9". This is a decided improvement in design compared with accumulators of block construction.

3 NON-CORROSIVE TERMINALS.

Specially designed non-corrosive terminals are fitted.

4 CONVENIENCE IN SERVICE.

When delivered every accumulator is **READY FOR IMMEDIATE USE**. There is no filling with acid or charging to be done. A drilled metal tap, having an 8" diameter vent, is supplied free for topping up after evaporation. A special spring clip is also provided with which tapings can be taken at any 2-volt intervals. Special end terminals are fitted suitable for taking standard wandet plugs, or for flex connections. Fitted in wood case with handle it is perfectly portable.

5 CHARGING.

These batteries can be charged at home from Public Electricity Supply, where other convenient facilities are not available, and any advice is gladly given by us when any difficulty exists.

COMPETITION OPEN TO USERS OF THIS ACCUMULATOR.

Owing to the various special features of our H.T. Accumulator we desire to give it a distinctive name, and invite suggestions. Prizes will be awarded as follows —

FIRST PRIZE • 75 GUINEAS
TO THE ENTRANT OF NAME ADJUDGED THE BEST

SECOND PRIZE • 25 GUINEAS
TO THE TRADER FROM WHOM THE FIRST PRIZE WINNER PURCHASED HIS ACCUMULATOR

1. The name must be original and preferably indicate one or more special features of the accumulator.
2. To enter competitors the special features of this accumulator enumerated above should be stated fully.
3. The envelope in which your suggestion is forwarded must be addressed: NAME COMPETITION, C. A. VANDERVELL & CO. LTD. ACTON, W.3.
4. Competitor's name and address must be stated, together with the name and address of the Wireless Dealer (if any) from whom the battery is purchased.
5. State the serial number quoted on the label attached to the inside of the accumulator. All winners of 2nd, improved prizes, will be provided for serial number of the accumulator higher than 10,000. Entries are restricted to one for each accumulator.
6. The names of prize winners will be advertised in a January issue of the journal.
7. No employee of Messrs. C. A. Vandervell or their associated Companies or Agents or Agents' employees are eligible to compete.
8. The Company's decision as to the prize winners will be final, and no correspondence can be entered into regarding same.
9. The last date for entrance is December 31st.

SALES DEPOTS.

BRISTOL: 2 AM, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Also supplied by all C.A.V. Service Stations and recognised Wireless Dealers.

Introduced by EUGENE LONGSTAFFE

A POPULAR VIOLIN SONATA

Pianoforte playing the
Sonata in A major, Op. 45
Allegro Moderato A major, Op. 45
Larghetto in A major, Op. 45

GRIG'S foot was first set on the path of
music by his friend Ole Bull, the Violinist
whose son he was. He was a good violinist
and played many Violin pieces that Grig
wrote.

He attempted few large-scale works, and when
he did the sonata became one. He wrote
that he has simply written three very effec-
tive and quite simply constructed pieces, very to the
point, but not essentially built up into one
piece. He is almost always at his best
in short pieces. The Sonata in A
major, first and last movements, at greater
intensity of feeling than most of his other

Mr. OLIVER BALDWIN.

Reading short stories over the microphone is
becoming fashionable among famous people.
Mr. Oliver Baldwin makes his first appearance
in this rôle this evening at 7.40 in the Birmingham
Studio. (S.B. from all stations.)

works. Its Second Movement, as in the other
two (earlier) Sonatas, is pleasantly romantic.

9.30 Major LENNARD TOSWILL: 'The Variety
Match'

SCHUBERT

Interpreted by J. H. B. B. B. B.
Sonata in B-flat major, Op. 10, No. 3
Allegro Vivace; Allegro ma non
Toppo

BEETHOVEN is supposed to have said on
his death-bed: 'You, Anse in [an intimate
friend] have my...'
Franz Schubert, on the other hand, shows us
Beethoven's music more fully and more fully than in the
last two movements of this Sonata.
The Scherzo (Quick, lively, with delicacy
is a 'jest' indeed, after Beethoven's own heart.
direct, flashing, perhaps frenzied. Notice the
abrupt turn given out in the Treble and repeated
in the Bass, then subjected to broken treatment
ending in one...
Then comes a subdued, mysterious Trio, and
the repetition of the Scherzo.
The Finale (Quick, starts with a peremptory
like 'Tune', then a chord arrests us, and
insists on the tune being repeated. Time after
time that chord picks up sharp the racing
and brings back the Tune, which,
however, takes all sorts of twists and turns.

So the music proceeds. But Schubert, the son of
a poet, is not breaking into a straightforward
when he becomes forceful for a moment, but
the music grows yet swifter and lighter as it
ends.

LADY REED
Original Patter Artist

Now no home need lack a Loud Speaker for Christmas.

The introduction of the "Lissenola" at the amazingly low price of 13/6 has created an unparalleled stir. Unbiased critics, seated behind a screen and asked to distinguish between a thirteen-and-sixpenny "Lissenola" and a well-known loud speaker at several pounds have been completely at a loss.

The "Lissenola" is sold exactly as illustrated above, and with every instrument are simple directions telling you how to make a horn of proved efficiency to attach to it. Full sized exact patterns and clear instructions how to put the horn together are given to you with each "Lissenola." If you possess a gramophone horn or any loud speaker horn—or any horn or trumpet—that will serve admirably. Make this test. Go to your nearest dealer—ask him to put on the best loud speaker he has in stock—then use the same horn on the "Lissenola" and hear if you can notice any difference.

Get a "Lissenola" for your home. Anyone who can use a pair of scissors and a paste-pot can turn out in half an hour a horn of most pleasing appearance, equal in performance to the finest money can buy. The secret of efficiency is in the "Lissenola," which possesses an electro-magnetic sound-reproducing mechanism concentrated in the most effective manner achieved, and sold at a record in low prices.

Your dealer will gladly demonstrate and supply—or send postal order direct if any difficulty. Post-free, or can be sent C.O.D.

Only four weeks to Christmas.

THE LISSENOLA

LISSEN LTD, 300-320, FRIARS LANE, RICHMOND, SURREY.

Phone: RICHMOND 2285 (4 lines).

SAVING SET BUILDERS £30,000 A MONTH

To the set builder who wants a good transformer and is willing to pay 23/6 for it, LISSEN says—**DON'T!** For LISSEN now saves the set builder who wishes to pay that price 15/- on every transformer, AND GIVES HIM A TRANSFORMER YIELDING INCOMPARABLE AMPLIFICATION BESIDES.

A saving of 15/- on every transformer multiply that by 20,000 purchasers a week of a single transformer each, and you have users of this new LISSEN Transformer actually saving on their radio bills £7,500 A WEEK, £30,000 A MONTH ON TRANSFORMERS ALONE.

This is a staggering figure BUT IT IS AN UNDER ESTIMATED POSSIBILITY. And not only is this huge amount of money saved to purchasers of the new LISSEN Transformer but better sets and better amplifiers are now being built than before. WE HAVE THE COURAGE TO OFFER YOU A 7 DAYS' TEST OF THIS NEW LISSEN and our courage is born of knowledge. FOR WE KNOW WHAT THIS FINE LISSEN TRANSFORMER IS CAPABLE OF, and we stand behind our claims with a 7 days' test offer so that you shall prove them for yourself.

How has this remarkable achievement been made possible? Huge production, special plant, matchless opportunity of design, our new direct-to-dealer policy of distribution to cut out all wholesale profits, our determination to place BIG POWERFUL AMPLIFIERS WITHIN THE REACH OF ALL WHO CARED TO BUILD THEM—these are some of the things which have brought this new LISSEN within your reach.

AND IT HAS SWEEPED THE COUNTRY.

Never again pay a high price for a transformer. We have unhesitatingly withdrawn all our own high priced transformers, which had been on the market and largely sold for several years past.

Compare this new LISSEN against the most high-priced transformer you know of. You will find it FULLY AMPLIFIES EVERY NOTE, EVERY TONE, EVERY HARMONIC, EVERY OVERTONE. Many expensive transformers will not do that. BUT THIS NEW LISSEN DOES.

8/6

GUARANTEED FOR 12 MONTHS.

TEST IT DURING 7 DAYS then take it back to your dealer's, or send it back to us if it fails to satisfy you.

TURNS RATIO 3 to 1, RESISTANCE RATIO 4 to 1
Use it for 1, 2 or 3 stages L.F.

It is suitable for all circuits and values you will want to use.

Obtainable at any good dealer's, or if any difficulty direct from us. Please mention dealer's name and address.

LISSEN LIMITED, LISSENIUM WORKS, 200-320, FRIARS LANE, RICHMOND, SURREY.

Managing Director: THOMAS N. COLE.

1/21

This better battery was needed—

In introducing the LISSEN New Process Battery we had in mind the distinct need for a battery made specially for good loud speaker work. In this new LISSEN Battery you will find all that is claimed for it. It will deliver, hour after hour, fine, forceful energy in smooth, clean, and even flow, unmarred by any defect, with a quality which never varies, never alters throughout a whole evening's programme.

The unique new process introduces a new power smoothness into loud speaker reproduction. Hear your loud speaker repeating in more natural tones than you have ever known everything that comes to it. Volume is clearer, different from what you have been used to. Naturally, the new process is a closely guarded secret.

When not in use this LISSEN Battery is building up without itself and will meet its next period of duty with undiminished readiness. Night after night it will serve without flinching until you really forget there is a battery there at all.

LISSEN has put into operation a new direct-to-dealer policy of distribution, too, which not only cuts out all wholesale profit and saves you money in the price of this battery, but ensures that the batteries go from the LISSEN factory at Richmond straight into dealer's shops within three days of being made. Every LISSEN Battery you get is brimful of new energy, always.

Size of battery 8 1/2 inches long x 4 1/2 inches wide—FULL OF LIVE YET SILENT CELLS EACH CELL WITH UNIQUE QUALITY CHARACTERISTICS.

RATED AT 60 VOLTS BUT GOES CONSIDERABLY OVER.

YOU WILL HEAR THE PREFERENCE YOUR LOUD SPEAKER WILL SHOW FOR THIS LISSEN BATTERY
Ask for "LISSEN New Process".

10/6

(Price would have been 13/- but for new policy)

Hear your LISSENIUM working off this battery to know what a good loud speaker and a good battery can do together.

Build an Amplifier—

One new LISSEN Transformer 8/6 one LISSEN Valve Holder 1/- one LISSEN Wire Rheostat 2/8, one LISSEN Fixed Condenser 1/- you can see for yourself that it is not dear. Your dealer will help you to build.

YOUR RADIO IS BETTER IF THE PARTS ARE LISSEN

LISSEN FIXED GRID LEAKS

Keep fixed in resistance value—they are also SILENT FOR EVER in use—they have been proved by the drastic test of exposure to rain and sun on our factory roof.

All resistances one price, previously 1/8, NOW 1/-.

1/-  **1/-**

CLEARER & BETTER SIGNALS.

Baseboard mounting type same price as above.

**LISSEN ONE-HOLE
FIXING, OF COURSE**

BUILD WITH ALL LISSEN PARTS—

and your receiver will give results which would never be possible with mixed parts because every LISSEN part is made to pull strongly with each other.

IMPORTANT TO THE TRADE: Retailers who have not already been notified of our new direct-to-dealer distribution policy should, in their own interests, communicate with us without delay. All orders must now be sent to us at Richmond and not to your wholesale factor.

THE FINEST FIXED CONDENSER—

At one time LISSEN sold these small energy conserving condensers at more than twice their present price. Although the price has been much reduced the CONDENSER CONTINUALLY HAS BEEN IMPROVED until to-day it is the finest fixed condenser that can be bought—that is the LISSEN way. LISSEN make these small condensers both good and low in price. The last price reduction was helped by our new policy of direct-to-dealer distribution which cuts out all wholesale profits.

ALWAYS DEMAND LISSEN CONDENSERS, no matter what else may be specified—THEY NEVER LEAK, THEY NEVER VARY, THEY DELIVER ALL THEIR STORED-UP ENERGY ALL THE TIME—no condenser is so accurate, nor so low in price for so fine a quality.

CAPACITIES.

LISSEN Fixed Mica Condensers

.0001 to .001 1/- each (much reduced).

.002 to .005 1/6 each (much reduced).

(Every grid condenser has a pair of clips included free.)

Note the new case which enables the LISSEN condenser to be fitted upright or used flat. Note the convenient grid leak fixing.

A LIFE-SAVER FOR THE HIGH TENSION BATTERY.

People often throw away much energy when they discard their high tension batteries. In most cases the batteries would have lasted much longer if there had been fitted across them a single LISSEN 2 mfd. or 1 mfd. condenser. This condenser ALLOWS THE BATTERY TO GROW OLD WITHOUT YOUR KNOWING. IF Ask your dealer—he will tell you how easily to fit. But make sure you get a LISSEN although they are much better than the ordinary Mansbridge type condenser in tin cases the LISSEN costs you no more.

LISSEN (Mansbridge Type) CONDENSER.

2 mfd. 4/8. 1 mfd. 3/10.

Other capacities are:

.01	2/4
.025	2/4
.05	2/4
.1	2/6
.25	3/4
.5	3/4
1.0	3/10
2.0	4/8

**YOU PAY NO MORE FOR A LISSEN
YET GET A BETTER CONDENSER.**

To a fine quality condenser has been added a specially insulated case which is not only a solid insulation giving you much needed protection when you use high capacity condensers for eliminator circuits, where if the condenser has a tin case the risk of short circuit of the condenser on to the case is a serious thing. The LISSEN condenser cannot short circuit on to its case that is one reason why you should never use any other kind.

LISSEN LIMITED, 300-320, FRIARS LANE, RICHMOND, SURREY.

Managing Director THOMAS H. COLE.

LISSEN PARTS—WELL THOUGHT OUT, THEN WELL MADE.

3/10

An economy which is no economy

FROM hedge to hedge the ploughman slowly cuts the furrow. Yard by yard the gleaming steel enters the rich brown earth. In the long day Hodge and his two horses may be able to plough a few acres. Over the horizon is the distant town. A busy tractor with several furrows is eating up the minutes this man has to do his work as a man with two horses can do in a whole day.

The tractor is a modern machine, and it is a fact that it is a very different thing from the old horse. But in spite of this, mechanized ploughing is rapidly driving the horse from the land. Sensible farmers no longer look at first cost—they seek for value. The extra expense of the tractor is amply justified by the big reduction it can make in the cost of ploughing and by its superior work.

There are still tens of thousands of wireless enthusiasts who could take this lesson to heart. They are still using bright emitters or foreign dull emitters because—like the two horse plough—they are low in first cost. But although they may be cheap to buy, they are not economical to use.

They are extravagant in current and last only a comparatively short time.

Compare, on the other hand, the wonderful new Cossor Point One taking only one-tenth of an ampere. An accumulator which would last a Valve Set fitted with Bright Emitters for ten hours would last more than 200 hours if Cossor Point One Valves were substituted. 190 hours of free Broadcasting every time your accumulator is charged. Think of the money you will save in charging costs alone.

But economy is not the only advantage you get with Cossor Point One Valve. They are fitted with a katalused filament which throws off a terrific stream of electrons without visible glow. The destructive effect of heat has been eliminated. Most valves—even dull emitters—come to an untimely end because their filaments have become brittle through excessive heat and are readily fractured. The Cossor katalused filament, on the other hand, retains its lifelong pliability, is abnormally tough and is capable of resisting hard knocks with ease. No valve will outlast a Cossor.

See your Dealer about these remarkable Valves—he has them in stock in three types:

The new Cossor Point One
No. 210D. With Black Band. An
extra sensitive Diode.
Consumption 14/-
amp at 18 volts.

The new Cossor Point One
No. 210H. With Red Band. Pre-
adjustment. An extra
valve. Consumption 14/-
amp at 18 volts.

The new Cossor Stentor Two
No. 215P. With Green Band. For
Power Valve use. Ideal
for Super Nets. Consump-
tion 18 amp at 18 volts 18/6

Cossor Point One

Ships that pass in the night

If you miss a play or a film on one occasion there is always, or usually, another chance. If you do not see it this week, you can see it next week, or the week after.

Broadcast opportunities do not recur. Programmes are not repeated. They pass like ships in the night, and do not come your way again.

Don't lose any more opportunities.

If your set is not giving the results it ought to give, put it right at once, so that future programmes are faithfully and amply received.

What of your valves? Are they the cause of poor quality or volume? If so, you can cure the trouble at once by replacing your present valves with B.T.H. Valves. Buy or borrow some to-night and try them in your set. Almost certainly reception will be improved, and you will have the assurance that no more items or programmes, eagerly awaited, will pass, vaguely heard, into the limbo of forgotten things.

The little brown box that brings Valve results to Crystal users

WHERE is the owner of a Crystal Set who has not longed for the results enjoyed by his friend the valve user? Who has not envied those able to fill their whole room with the music and speech of the night's broadcast? But now since the advent of the little 'brown box', anyone with a Crystal Set living within fifteen miles of a broadcasting station (or eighty miles of Daventry) is on a complete level with the Valve Set owner. The strain of headphones is gone for ever: for the Brown Crystal Amplifier, brings to the Crystal Set user

In APPEARANCE PRICE and PERFORMANCE the

AMPLION CABINETTE

IS AN OUTSTANDING
ACHIEVEMENT!

Finish - Finished in dark
fumed oak with latest
process of staining
and polishing.
Length 64 in. height 54 in.,
depth 6 in.
Price - £23 3s.
Model - AMPLION Models
from 38/-

THE design is entirely new, and as will be seen from the illustration the outward appearance of the instrument is such that it will harmonise in a pleasing manner with the furniture and decoration of almost any room. The cabinet is dark fumed oak, beautifully finished, in a semi-Jacobean style, by an entirely new process. The greater part of the front is occupied by a fretted grille, through which the sound emerges, and at one end a hinged door provides access to the electro-magnetic unit and its adjusting screw. The unit is of the latest high efficiency pattern with floating diaphragm and the acoustic system incorporates novel and exclusive features. The tone is natural yet pleasingly mellow and is somewhat reminiscent of that usually associated with the famous Amplion "Dragon" loud speakers.

Obtainable from AMPLION STOCKISTS, Radio Dealers or Stores.

Brandes

From any reputable Dealer.

THE AUDIO TRANSFORMER.

Ratio 1 to 5. High amplification of applied voltage, together with straight sine-amplification frequency curve. Also and stage, 1 to 3.

THE BRANDOLA. Greater volume with minimum current input. Large diaphragm gives fullness in upper and lower registers. Walnut plinth, electro-plated fittings.

THE TABLE TALKER. Made in solid brass construction of goose-neck horns eliminates all harshness. Adjustable. Height 18", neutral brown finish, padded base.

MATCHED TONE HEADPHONES.

The synchronised effort of both receivers discovers greater sensitivity and volume and truer tone. Light, comfortable and sturdy.

THE BRANDESET II. Excellent for long-range loud speaker work. Straight line frequency Condenser tuning. Reaction and grid bias. Fixed coil and frequency switch for long and short waves.

THE BRANDESET III. The same ingenious characteristics as the 2-valve receiver. Employs an extra stage of audio frequency. All battery connections plated into one lead.

THE ELLIPTICON. Driving unit of special design. No diaphragm but a small armature which reacts to the faintest impulse. Special sound producing elliptical concavity.

THE TABLE CONE. Attractive Cabinet. Circular diaphragm with sensitive driving unit and large magnet. Superior to any similar loud speaker at the price.

WIRELESS**

THIS H.T. BATTERY

- costs only 8/9,
- is made throughout in London,
- is sent post and packing free,
- reaches you, brim full of energy within a few hours of manufacture owing to the enormous number we sell daily,
- maintains its voltage for the longest possible time owing to the extremely generous "elements" of which it is made,
- will give you a long life of loud, clear reception free from all crackling noises,
- is tapped every 3 volts enabling you to apply the exact voltage required by your valves for best results,
- is supplied complete with Red and Black wander plugs—no extras to buy,
- is, in short, the **FINEST IN THE WORLD** because no other H.T. Battery made (except other Fellophone batteries) can come anywhere near it in performance or value.

Other Fellophone Batteries are listed below. We can only offer you this astounding value because, by supplying you direct we save all the middleman's profits and so give you a better battery for less money.

MONEY-SAVING OPPORTUNITY

ALL INTERESTED in **WRITE TO-DAY**
WIRELESS should

Here is an opportunity to secure a copy of the **SAXON GUIDE TO WIRELESS** and thereby saving one of the most valuable books in the world. This 176-page book explains everything you wish to know about Wireless, enabling any beginner to make wireless instruments which are unequalled in price, quality or EFFICIENCY and the cost is only one-fourth the price charged for ready-made instruments not half so good.

SIMPLE INSTRUCTIONS

Saxon receiving sets have established their reputation for efficiency, lasting power, Great Britain, and the **SAXON GUIDE TO WIRELESS** enables even a novice to make these without difficulty. The book is written in plain every-day language, and gives a thorough description of what you can do. Thousands of people in every walk of life have made their own wireless sets by following the instructions in the **SAXON GUIDE** and we have received many letters from our readers expressing their appreciation of the book. The book costs only one-fourth the price of the sets it describes.

FULL INSTRUCTIONS WITH CLEAR WIRING DIAGRAMS are given for making SUPER EFFICIENT CRYSTAL SETS, LOCAL AMPLIFICATION RECEIVERS, SINGLE VALVE SETS, ONE AND TWO VALVE AMPLIFIERS, TWO, THREE AND FOUR-VALVE TUNED ANODE ALL-WAVE RECEIVERS, AND THE VERY LATEST TYPE OF FIVE-VALVE ALL-WAVE RECEIVERS. NO SOLDERING, NO SPECIAL TOOLS, NO KNOWLEDGE REQUIRED. The chapter on testing wireless components is alone worth the price of the book.

OUR FREE APPROVAL OFFER.

The book will be sent free on approval if desired, on receipt of your promise to return the book if not satisfied within 7 working days. Nothing could be more simple—it is so easy to secure the **SAXON GUIDE** that you can keep it for ever without any obligation. If you are not satisfied, return it to the Saxon Radio Co. (Dept. 24), Henry Street Works, Blackpool, Lancashire.

Three valves
that do the
work of four!

FELLOWS WIRELESS

The Fellophone Grand Three

Mounted in a well-finished cabinet with folding doors and supplied either in Jacobean or Sheraton styles, the Fellophone Grand Three is the most handsome receiving set at present on the market.

The receiving circuit of this set is ingeniously arranged to provide both the volume and the range of a four-valve set, but with the first cost and upkeep of three valves only.

The effect of a four-valve circuit is obtained by dual amplification on one valve, so that great range and selectivity are obtained and at the same time the two stages of L.F. Amplification afford ample volume for Loud Speaker work.

Several thousands of these sets have been sold and we have many highly enthusiastic letters from their delighted owners.

You can inspect and hear these sets working at any of our branch addresses given below.

The Fellophone Grand Three, including
Marconi Royalty and H.T. Battery .. **£12 15 0**

Complete with H.T. Battery, 3 Louden Valves,
6-volt Accumulator, 1 pair Fellows Light-
weight Headphones, Aerial, Insulators and
Instructions (Marconi Royalty included) .. **£15 10 0**

For deferred payment terms, see our Catalogue No. 10, free on request. All goods are sent packing free, carriage forward, and you can try the Grand Three for seven days by forwarding full cash value. Remittance will be returned in full if you are in any respect dissatisfied.

Here's a remarkable offer

PATENT
No 241353

We have just received a new patent for our Slektun Coils. This is a remarkable advance in the art of coil winding. It is a coil of wire wound on a core of air, and it is the only coil of its kind. It is a coil of wire wound on a core of air, and it is the only coil of its kind. It is a coil of wire wound on a core of air, and it is the only coil of its kind.

Great Price Reduction Coils supplied Direct

We are confident of the fact that Slektun Coils are the only coils that have ever been produced and that they are the only coils that will give you the best results. They are the only coils that will give you the best results. They are the only coils that will give you the best results.

Slektun Coils are 240 in. in diameter. 1770 Micro-Henries. Self Capacity 9 Micro-Micro Farads.

These figures constitute a record in the manufacture of Inductance Coils.

So, if you are one of the few that you will obtain unprecedented results that we are prepared to forward "Slektun" Coils direct to you, carriage paid, at the reduced price and on the condition that if you are not fully satisfied with them they will be returned within 7 days and money refunded. Read the details alongside and forward your order at once. This offer is only open for a limited period.

We are only supplying Coils in the Slektun Coils in direct with Slektun Coils. We are only supplying Coils in the Slektun Coils in direct with Slektun Coils. We are only supplying Coils in the Slektun Coils in direct with Slektun Coils.

Wool in the Microphone

"Pretty clear, eh . . . ? What? Sounds like the announcer is stuffing cotton-wool down the band's instruments . . . ? Can't hear . . . ? Oh, it's that rotten accumulator. Didn't know it was so low. Here, Johnnie. Run round to Mr. Jones. Ask him to lend me a spot of low tension . . ."

How often does that happen to you? Where the set boasts a P. & R. Gravity Float accumulator it *can't* happen. The Gravity Float *asks* for a re-charge. Its indicating floats say how far off discharge it is.

There are many technical reasons why the P. & R. Gravity Float is the kind of battery you've often hoped for. Better working reasons, like larger plate area, a stated capacity which is the true capacity, a burliness which resists buckling on accidental short circuits; preventive reasons, like anti-creep terminals, rigid plate supports, and "sludge" collecting ducts—they're all in the P. & R.

We have written a book all about the technique of all kinds of accumulators, a copy of which we shall be happy to send you in exchange for a p.c. to Peto & Radford, 50 Grosvenor Gardens, S.W.1

P AND R
PETO & RADFORD
ACCUMULATORS
The beginning and the end in
POWER

Louden Valves

The Street Long Stratton

"The two original valves have been working all the time."

Mr P Heath, of Long Stratton, has had over 12 months use of the two Louden Valves in his Little Giant Set.

Like all other Louden Valve users, Mr. Heath is highly satisfied with the results, and he shows it by ordering two more Loudens.

Read what he says:

"I have been using your Louden Valves in my Little Giant Set for over 12 months and I can say that they have been working all the time. I have had no trouble with them and they have given me a very good sound. I have had no trouble with them and they have given me a very good sound. I have had no trouble with them and they have given me a very good sound."

Louden Valves are made by British inventors in a British factory with British materials and can be depended upon for the finest volume, tone and over-all performance. They can only be offered at such low prices because of the directness of the manufacturer to the consumer and the elimination of the middleman's profit.

The list below gives prices and full particulars.

Order your Louden Valves from us by post.

3783, 37

FELLOWS WIRELESS

L.T. Charger 45/-

H.T. Charger 50/-

(carriage forward).

—and now H.T. Accumulators

If you have Alternating Current (A.C.) Electric Light you can now charge both H.T. and L.T. Accumulators at home. The New H.T. Accumulator Charger can be supplied for use with any common A.C. Lighting Voltage, but in all cases it gives a fixed output of 60 volts at 1/4th of an ampere. H.T. Accumulators can thus be charged in batches of 60 volts at a time, or two or more 60-volt units may be connected in parallel and charged simultaneously.

The H.T. Charger is similar in operation and general appearance to the L.T. model shown above, and like it is simplicity itself to use. Just plug the adapter into a lamp holder, twist the spindle to set the motor running, connect up the accumulator to be charged—then forget all about it until to-morrow morning.

No chemicals, no costly valves to renew, no regulating (the charger automatically gives the required charging rate), no noise, and next to no expense, the charging cost being 1d. for 10 hours.

If you have Alternating Current you cannot afford to be without a Fellow's Charger. It so on its cost many times over in convenience, reliability and economy.

By remitting full cash value you can have either H.T. or L.T. model on 7 DAYS' FREE TRIAL. If you are not more than satisfied we will return your money in full.

N.B. When ordering please state capacity, voltage and frequency (cycles) of your mains. You will find this information on your meter.

SOME VALVES ARE VALVES

YOU try one valve after another in this or that stage, and listening critically you persuade yourself that the result is a little better or a little worse. Then perhaps by chance, or very likely on personal recommendation, you try a Cosmos S.P. Valve, and realize with delight that no straining of your ears or the exercise of supercritical faculties is required to recognize the immediate increase of pep and volume obtainable. How is it then that such a distinguishable difference, such a distinct improvement can be obtained?

The explanation lies in the unique Shortpath construction, which, without sacrificing anything in rigidity, reduces the path the electrons have to travel to a minimum impossible with other methods of construction, resulting in efficiencies and impedances hitherto unobtainable. It is not overstating the case to say that this scientific construction marks the most notable advance in valve manufacture since their earliest development.

* It is a significant fact that at the Manchester Wireless Exhibition, in the £500 Wireless Research Competition all prize winners in the 4 Valve Receiving Set class used "Cosmos" Shortpath Valves.

1st. Prize Winner used 4 "Cosmos" S.P. Valves.	
2nd. " " " 3 " " "	
3rd. " " " 2 " " "	
4th. " " " 1 " " "	

"Cosmos" Shortpath Valves are and always have been tested dynamically.

STERLING TYPE 33 SPEAKER

Price 33
£5-5-0

THIS model has been designed primarily to prove the reproduction of the lower notes of the scale, and the effect of a more natural rendering of the bass notes. It has been found that the reproduction of the lower notes of the scale is the most difficult of all, and the result of a general finding is

that the frequency of the instrument thus the use of the speaker of the Sterling Type 33 Speaker the volume of a put for a given power will be and be greater than with the majority of Loudspeakers while the range is far greater. From the point of view of the reproduction of the lower notes of the scale the Sterling Type 33 Speaker is a most successful reproduction of the lower notes of the scale.

Send for literature describing the full range of Sterling Loudspeakers.

Banish 'Ringing' noises

At last you can run your receiving set without the intrusion of those "ringing" noises, caused by shocks and vibration, which spoil perfect reception, and which are increased by the use of dull emitter valves.

fit the NEW

Fit the new NELSON NON-PHONIC SINGLE FILAMENT VALVE made so that the greatest shocks or vibrations do not reach the delicate internal circuit, the efficiency of the valve being no way impaired. Perfect reception is assured by the "floating" of the glass envelope on a rubber cushion, a method superior to the common one of valve and socket and microphone valve holder.

THERE exists in the minds of many the idea that wiring the home for Electric Light means many lengths of pipes, cutting of walls, piercing of ceilings and a healthy bill for "Making good." All this is ancient history. This modern system of electric wiring is specially designed to eliminate the possibility of damage to existing structures. Its adaptability is such that Castles, Churches, Mansions and Houses of all size and age have been equipped efficiently at a reasonable cost and without disturbance. In the van of domestic Electrical progress is the Callender Kaleeco Wiring System. The wires employed in this system are rubber covered, taped and metal sheathed. These are slipped to wall surfaces and although stiff enough to prevent sagging are easily bent round mouldings. When given a coat of enamel or distempered to tone with the decorative scheme the wires are practically invisible. Full particulars of this thoroughly modern Wiring System will be supplied by your Local Electrical Contractor.

A NEW LOUDSPEAKER

An Ideal
Xmas Present

TESTED, TRIED AND PERFECT

After two years of research and experiment, we are able to announce an Electron Quality Loudspeaker at a price that will amaze the Radio public.

Electron Loudspeakers are made with micrometer precision and devotion to high technical ideals.

If you want a Loudspeaker which is artistic, which is beautiful, sweet-toned and durable, with a superb reproduction, then you cannot do better than invest in an ELECTRON.

It is beyond criticism and fully guaranteed by the Proprietors of ELECTRON WIRE which made broadcasting popular.

FULL SIZE FULL VOLUME FULL TONE

You will not know radio values until you have seen and heard the Electron Loudspeaker, which must not be compared with those "tiny" squeakers. Notice the measurements of the scientifically designed horn, which brings out only the very best of the transmissions.

BRITISH MADE IN A BRITISH FACTORY

ELECTRON LOUDSPEAKERS are produced throughout in a British factory by British labour. They are therefore reliable in every respect.

14 DAYS' APPROVAL

Try the ELECTRON LOUDSPEAKER for 14 days, and if you are not more than satisfied return it to us and the full purchase price will be refunded. We could not make a fairer offer.

Go to your Dealer to-day or send your remittance (50/- only) to us, stating whether oak or ebonite finish is required.

The WONDERFUL P.M. FILAMENT WITH THE HIGHEST FIGURE OF MERIT

MULLARD P.M. VALVES GIVE YOU MOST VALUE FOR MONEY

The higher the figure of merit of a filament the greater the efficiency and the more you get for your money. For the same input the wonderful P.M. Filament gives you twice the out-put of the ordinary dull filament and 20 times that of the best bright filament.

Couple this with the huge life of the P.M. Filament due to its operating temperature being as low as 180° below the pyrometer scale and you will understand why it pays to demand
